ECOLOGY, EVOLUTION AND CONSERVATION

UCEAP Transcript Title

ECOL EVOL & CONSERV

UCEAP Quarter Units

6.00

UCEAP Semester Units

4.00

Course Description

This course examines the basics of evolution, ecology and conservation biology. It covers how evolution underpins both ecology and conservation and how these areas of biology impact every-day life; genes (micro) and species (macro) evolution; human diseases, drug resistance and invasive species; how fossils have contributed to our understanding of life on Earth today; and how New Zealand science is saving our unique ecosystems.

Language(s) of Instruction

English
