COURSE DETAIL

MATHEMATICAL LOGIC

Country
Korea, South

Host Institution
Yonsei University

Program(s)
Yonsei University

UCEAP Course Level
Upper Division

UCEAP Subject Area(s)
Mathematics

UCEAP Course Number
102

UCEAP Course Suffix

UCEAP Official Title
MATHEMATICAL LOGIC

UCEAP Transcript Title
MATHEMATICAL LOGIC

UCEAP Quarter Units
4.50

UCEAP Semester Units
3.00

Course Description

This course covers basic mathematical logic such as propositional logic and first order (predicate) logic by studying the notions of truth, satisfaction, model, proof and Turing machine. Goedel's completeness theorem is presented and his incompleteness theorems are introduced. The course studies the completeness theorem for the first-order logic using Henkin's construction method. As a consequence compactness theorem is presented and Lowenheim-Skolem theorem as an application is studied. Turing machine, the theoretical background of the contemporary digital computer design, is introduced and compared with Goedel's incompleteness theorems.

Language(s) of Instruction
English
