4.00

Course Description

This course examines we human beings use on-line technology to interact with others, as well as how cognitions and behaviors are affected by this technology. It covers topics ranging from on-line relationships and how people construct their digital identities, to gaming and artificial intelligence as well as the psychological applications of virtual and augmented reality to our lives. It also aims to facilitate understanding of the field of cyberpsychology. In particular, the implications that on-line technologies can have for the subjective self and interactions with others; in addition to the wide array of practical applications of Internet-based technologies to our daily lives
