ENVIRONMENTAL ECON

UCEAP Quarter Units
12.00

UCEAP Semester Units

8.00

Course Description

This course explores key concepts and recent advances in environmental economics with the view to addressing environmental policy questions. It is concerned with studying the interaction between human activity and the natural environment. Students capture work both on how economic growth can be made cleaner but also on how to mitigate the damages from this growth. The course illustrates how frontier theory and empirics from economics can be brought to bear on the key climate, environmental and energy challenges that face mankind.
