**UCEAP Semester Units**

3.30

## Course Description

This course provides an introduction to data analysis in the social sciences through the multiple linear regression model. Emphasis is placed on the interpretation of the model and the application of statistical inference techniques to solve case studies. The course discusses how to make inferences under non-standard situations caused by the nature of the variables in the model or by the nature of data. Previous study of probability, statistics, algebra and calculus is recommended.
