Course Description

This course analyzes advanced management practices in complex business environments and offers a comprehensive introduction to Lean Management, a model derived from the diffusion of the principles and tools originally developed at the Toyota Motor Company. The course emphasizes the organizational, managerial, and human aspects of Lean Thinking and illustrates its adoption in a variety of industries and business functions. It analyzes how firms should design and implement lean systems and offers a framework to undertake and sustain lean transformations. It illustrates how the adoption of Lean Thinking principles and tools affect managerial decision making and problem solving, eliminating waste and variability. It also elaborates on recent trends such as the application of lean thinking to innovation (Lean Product and Process Development), to entrepreneurship (Lean Startup Method), to sustainability (Lean & Green), as well as its connection to the Agile movement.
