Course Description

From the first European measures to the European Green Deal, this course focuses on energy transition plans and strategies. To do so, it analyzes the stakes inherent to the multilevel governance of energy in the EU, between European objectives, national policy-making, and local implementation of energy infrastructures. Through this multi-scale approach to public policy, the course explores and compares the challenges raised by the regulation of different energy forms in various European countries. It tackles renewable energies such as wind power, fossil fuels such as shale gas, and provides an overview of European energy policy-making through national case studies.
