Course Description

This course concerns the modification of cultural practices to produce wine products in organic and biodynamic agriculture. It covers regulatory aspects and certification, the biological and physiological impact of organic and biodynamic viticultural practices, cultural aspects of the implementation of certification and conversion period, biodynamic principles, and specific viticultural practices. The course also discusses the economics of the organic, natural, and biodynamic wine market, and the economic impact of the conversion. Additional topics include vinification and conservation without sulfur dioxide, microorganisms in the context of organic wine production, ecology, and diversity. Finally, the course discusses regulations, practices, experiences, and constraints of organic agriculture.
