**UCEAP Semester Units**

3.30

## Course Description

The course examines the organization of spaces from the point of view of population (i.e. recognition of spatial patterns and dynamics, with population as the focus) and the relevance of the study of population dynamics with special reference to their spatial implications for development. Examples from both the developed and the developing world are be used to treat an introduction to population geography, data, spatial measures and mapping, population characteristics (such as age, sex, nuptiality, households, urban-rural patterns, and socio-economic), components of population change, population distribution, world population growth, and distribution.
