Course Description

This course provides a sociological perspective on economic, social, and political processes, focusing especially on global social change and sustainable development. Students acquire the knowledge required to understand and critically examine the discussions pursued about the global social change that marks modernity, focusing especially on the post-war period. The course includes four modules, this is the second module: Contemporary Sociological Perspectives on Global Development. The second module focuses on contemporary challenges to development in different parts of the world. It adopts both a macro and a micro perspective reviewing changes regarding the role of the state, labor markets, population structures, and families. Sociological theories and concepts are used to highlight how inequality is created and maintained by different power structures with regard to, for example, gender, sexuality, ethnicity, and class, and intersections between them. The module focuses on contemporary economic and political sociology and feminist theory.
