Course Description

This course follows the approach that citizens are 'predictably irrational' (Ariely 2008). This model of human behavior has consequences for how governments can and should steer society. A behavioral approach to government steering such as 'nudging' is explored in this course. Students explore what it means to take a behavioral approach to public administration, how it differs from traditional policy, and to what extent has a behavioral approach been taken up by governments already, and learn about opportunities and pitfalls of a behavioral approach. Questions about whether a behavioral approach is effective, appropriate, and ethical are discussed. Finally, the course explicitly studies the policy process that leads to 'behavioral' policies including the other actors, such as interest groups, and contextual factors, such as institutions, rules, and norms that influence this process. Theoretical knowledge, practical examples, guest lectures, field trips, discussions, debates, and presentations are used.
