Course Description

This course focuses on the social transformations of food systems. More specifically it focuses on a) how less sustainable systems of food provisioning are deliberately transformed into more sustainable ones and b) how this transformation process and its implications can be understood and assessed from a social sciences perspective. The course provides a social sciences perspective on the dynamics and diversity of sustainable systems of food provisioning and includes the tools to assess their impact on the environment, society, and health. This is achieved by a combination of lectures, group assignments, and workshops.
