COURSE DETAIL

STATISTICAL MACHINE LEARNING

Country
Korea, South

Host Institution
Korea University

Program(s)
Korea University

UCEAP Course Level
Upper Division

UCEAP Subject Area(s)
Statistics Computer Science

UCEAP Course Number
107

UCEAP Course Suffix

UCEAP Official Title
STATISTICAL MACHINE LEARNING

UCEAP Transcript Title
STAT MACHINE LEARN

UCEAP Quarter Units
4.00

UCEAP Semester Units
2.70

Course Description

This course establishes the foundation of a wide range of statistical learning methods. It aims to understand and utilize the fundamentals of various statistical learning models.

The course covers:

- statistical learning;
- classical linear methods for regression and classification;
- cross-validation;
- bootstrap;
- modern linear methods;
- nonlinear methods;
- tree-based methods;
- support vector machines;
- unsupervised learning;
- neural networks, and
- deep learning.

These topics are the basics of statistical learning, but the core of machine learning. By the end of this course, students will have easier access to and understanding of deep learning and artificial intelligence.

The course requires the following prerequisites:

- Python Basic – this course assumes a basic knowledge of Python
- STAT 241: Matrix Theory or Linear Algebra - provides a computational foundation for understanding statistical models.
- STAT 232: Mathematical Statistics- knowledge of probability theory and asymptotic evaluations.

Language(s) of Instruction
English
