UI DESIGN PROGRAM

**UCEAP Quarter Units**

4.50

**UCEAP Semester Units**

3.00

## Course Description

This course introduces students to practical and experimental aspects of user interface design and programming, with the intention of demystifying the digital products we use in everyday life. Students will learn the fundamental principles of user interface design; use UI Design software such as Figma to make interactive prototypes, and write basic HTML/CSS/Javascript to create web interfaces. In addition to creating conventional user interface designs, students will be challenged to create interfaces that have conceptual and non-traditional outcomes that speak to their personal interests and motivations. In response to a partial history of User Interface design, students will be compelled to situate their work in the context of the development of Human Computer Interaction for art and design. This context will be given via in-class lectures, hands-on exercises, guest lectures, and a workshop.
