5.00

**UCEAP Semester Units**

3.30

## Course Description

This course covers the main trends in environmental management in industry. Students explore the central concepts in environmental management, such as pollution prevention, environmental management systems, life-cycle management, environmental management strategies, industrial ecology, and circular economy. They learn selected theories and models concerning environmental management, in particular the four-stage model of environmental strategy, models of Corporate Social Responsibility, the organization theory of Mintzberg, and ecological modernization theory. In addition to explaining these concepts and theories, the course provides practice-oriented training based on case studies. Although the course primarily deals with industrial organizations, most of its contents also apply to other types of organizations.
