Course Description

This course develops an understanding of the theory and methods involved in the creation, storage, analysis, and presentation of geospatial data. Using industry standard software, the course provides the knowledge and skills to tackle advanced problem solving using Geographic Information Systems. This knowledge is fundamental not only to research in physical geography, environmental science, and many other disciplines, but provides a critical skill set used widely within a range of industries (including environmental management, local and national government, the utilities, and the insurance sector).
