Course Description

Prior knowledge of chemistry, physics, or mathematics is not required to enroll in the course. This course is designed for students in the Humanities or Social Sciences with no previous education in Chemistry. It may also serve as a remedial course for students wishing to proceed to a regular level 1 Chemistry course. Chemistry involves the study of matter and the changes it undergoes. Chemistry plays an important role in everyday life, as matter is everywhere and everything around us consists of chemicals. This includes humans, fauna, flora, stars, and planets, and from a somewhat different perspective food, clothes, buildings, vehicles, computers, drugs, and art. The course includes an overview of the composition, structure, and transformations of matter and a project in which students apply chemical knowledge in a non-science discipline.
