UCEAP Semester Units

3.00

Course Description

A continuation Labor Economics I, this course delves further into the subject by combining theoretical concepts with empirical methods to gain a comprehensive understanding of the field.

This course begins with a review of dynamic models and the techniques used for their estimation and offers the opportunity to write, solve, and estimate a dynamic model using these techniques. Then, the course shifts exploring family formation through matching models, as well as delving into family decision models, which include unitary and collective models. Additionally, the course covers various topics, such as the gender gap, retirement, and dynamic family decisions, using these models.

The primary objective of this course is to offer students a wide-ranging knowledge of the field and familiarize them with essential discoveries and advancements in the literature, thereby aiding them in their future research endeavors.
