Course Description

Structure and function of nervous system is a course designed to introduce the structure and function of the human nervous system. Learning formats include lecture, laboratory observation, and group discussion. The course begins with the structure of spinal cord, spinal, nerves, brain, and cranial nerves. Role of nervous system in sensation, movement, and homeostasis, higher mental functions, autonomic system, and special senses are introduced and developed as the course proceeds. Common diseases of the nervous system will be discussed in group. A neuroanatomy laboratory will observe the structures in gross brain specimens and models.
