6.00

UCEAP Semester Units

4.00

Course Description

This course examines a pertinent challenge of humankind: how to feed 12 billion people while maintaining the integrity and function of our planet. It challenges participants with contrasting viewpoints for a nuanced understanding of the multidimensional aspects of food production and consumption. Course participants explore the food debate as consumers and scholars, with focus on the science behind innovation of food and food systems, locally and globally. Course participants map the future of food and agriculture with view of the UN's Sustainable Development Goals.
