Course Description

This course gives an introduction to the principles behind effective operational quality systems in these complex food production chains. Major theoretical topics of the course include the relationship between food properties and quality attributes in the food production chain; traceability of food products in the food production chain; basic principles of operations management; principles of major technological tools, methods, and techniques in quality control and inspection; and introduction to major quality assurance standards. The course contains assignments related to these 4 topics. The assignments serve as a basis for critical analysis of factors influencing the actual operation of the implemented quality system.
