Course Description

This course provides an introduction to genetic studies on behavior, emotions, and cognition - a psychological discipline known as "behavior genetics." The course covers basic concepts in quantitative and molecular genetic sciences, and how these can be applied to study animal behavior, human traits and disorders, and socioeconomic outcomes. This includes studies of genetic and environmental contributions and how statistical models of complex traits are analyzed with computer software. The course covers development of research skills for practical implementation of quantitative genetic statistical methods applicable throughout the life sciences.
