Course Description

This course covers the basics of "traditional" microeconomics, the so-called "price theory:" the analysis of the perfect competition and its application. This course covers: market, demand, supply and the equilibrium; consumer behavior and utility maximization; firm behavior and profit maximization; market failure (imperfect competition, imperfect information, externality, and public goals) and economic policy; taxes and subsidies, income distribution, etc.

This course studies economists' way of viewing, explaining, and predicting the world, focusing on microeconomics principles that demonstrate the decision making of individuals, including consumer, firm and individual industry. It emphasizes applications and polices rather than formal economic theory.
