6.00

**UCEAP Semester Units**

4.00

## Course Description

This course introduces basic principles of the circular economy and the strategies, market arrangements, and regulatory landscapes that set barriers and enablers for circular transitions. The course is intensive and follows a problem-based learning approach, where students develop novel solutions to a real-world challenge posed by a case company that aspires to go circular. The class requires active participation from students, with classroom activities and discussions as well as working in project teams inside and outside the classroom. It facilitates learning by doing, learning by observing, and learning by explaining and critical reflecting. Students are supported in their learning process with coaching in collaboration with the Copenhagen School of Entrepreneurship.
