UCEAP Semester Units

4.00

Course Description

This course examines the knowledge, skills and attitudes needed to be able to investigate and report on the sustainability of proposed site-specific land-uses in the context of dynamic Earth surface system behaviors. Specific topics studied will include principles of landscape evolution; the use of remote sensing data and computer simulations to analyze and understand surface processes; geomorphological mapping; response of rivers to changing environmental conditions; and synthesis of knowledge and skills in technical report production.
