**Course Description**

This course analyzes the relationship between development and the environment from a historical perspective, emphasizing the environmental conditions that have influenced human and economic development in Latin America and Chile, the structuring of human settlement, and the levels of exploitation of natural resource. Students study the introduction of exotic species, the makeup of national public health services, and urbanization and land use. Other topics include: production ecology and sustainable development; the environment and international relations; environment, medicine, and public health in Chile and Latin America; urbanization and land use in Chile and Latin America; environmental conflicts in Chile during the 1990s; public policy, history, and the environment.
