**UCEAP Semester Units**

4.00

## Course Description

This course examines the relationship between architecture, place and society and explores the meaning of cultural and social sustainability in architectural design. A key aspect of social sustainability is the practice of social responsibility, and the course explores how this may occur, including involving people in the design process. On completion of this course students will be able to demonstrate: an ability to better understand the connections between architecture place and society, and the social, cultural, political and economic factors affecting sustainable environments; skills and knowledge in participatory processes necessary for effective communication about environmental design issues; increased critical awareness about social responsibility in relation to the practice of architecture and the design of the built environment, and an ability to exercise this awareness.
