**UCEAP Semester Units**

3.00

## Course Description

This class is designed to equip students with the fundamental principles of statistics commonly used in communication research. This course is the first in a sequence of graduate methodology classes required of all students enrolled in the M.A. or Ph.D. program in Communication. Students acquire working familiarity with the basic principles and theory behind descriptive and inferential statistics. By the end of the semester students understand the difference between descriptive and inferential statistics, understand the logic of null hypothesis significance testing, and be able to conduct basic statistical analyses (including t-tests, a single-factor ANOVA, correlation, regression, and chi-square) using commonly used statistical software such as R. Students who complete this course are able to read and understand empirical research, analyze data from their research projects, and report results in accordance with the APA standards. Topics include Basic Concepts and Vocabulary, Introduction to R, Probability, Independence, and the Normal Distribution, Hypothesis Testing Concepts and Applications, Factorial ANOVA, Correlation & Chi-square, and Regression fundamentals.
