**UCEAP Quarter Units**

6.00

**UCEAP Semester Units**

4.00

## Course Description

This course provides an overview of human anatomy. It covers human topographic and developmental anatomy; the principles relating to each type of anatomical structure (skin, fascia and skeletal muscle, bones and joints, vessels and nerves, visceral structures); the essential factual information regarding the specific anatomical structures forming the body's major organ systems (musculoskeletal, nervous, cardiorespiratory, digestive, genitourinary); the boundaries and contents of clinically important regions; and the appearance of normal anatomical structures via modern imaging techniques.
