#### **UCEAP Official Title**

GLOBAL CHALLENGES IN ENVIRONMENT AND DEVELOPMENT

# **UCEAP Transcript Title**

GLBL CHALLG/ENV&DEV

# **UCEAP Quarter Units**

6.00

## **UCEAP Semester Units**

4.00

## **Course Description**

The planet and humankind face major current environment and development challenges, including climate change, losses of natural habitats and biodiversity, poverty, and non-sustainable food production systems. Using selected problems and cases, this course examines how social and natural sciences address the relationship between environment and development. This includes providing a well-grounded understanding of key theoretical, conceptual, and practical debates and issues; and experience with interdisciplinary approaches to research through active participation in discussions, group work, and essay writing. The course thus introduces tools and frameworks, which can be used to think and generate knowledge across disciplines. The course places particular focus on countries in the Global South and includes cases from the Global North. During the course, students write a group based essay, which along with the rest of the curriculum forms the basis for individual oral exams.
