Course Description

This course examines the science and scientific methods within the life, environmental and Earth sciences. In particular, the course will introduce students to the research undertaken in the School of Biological, Earth and Environmental Sciences (BEES) and its application to contemporary environmental problems, management and issues. The course also focuses on skills including relevant quantitative techniques, methods for collecting environmental data including new technologies, sampling and experimental design, methods for visualizing environmental information (graphics, mapping) and communicating results.
