UCEAP Semester Units
3.00

Course Description

This course provides a structured introduction to environmental issues and collective action and is divided into three modules. It begins with an overview of environmental challenges, exploring theories on economic impact, overpopulation, and consumption. The course then examines literature on collective action, focusing on solutions to resource dilemmas. It engages with these ideas through essays, discussions, and case studies in fisheries and wildlife management. The final module emphasizes research skills through theory, application, and feedback, developing essential tools to study complex environmental and collective action issues.
