3.30

Course Description

This course teaches the foundational concepts of geomorphology in preparation for advanced courses and a final Capstone project. It relies less on traditional rote lecture and more on activities and application of concepts presented in the text and during class time. This course focuses primarily on large-scale geomorphology, and how the large-scale topography students observe on Earth today is both created and broken down through time. Students examine the two primary drivers of geomorphology: tectonics and climate. They consider questions that on their face seem very basic- for example, why is the Earth round? but which have complex, fascinating answers with implications for the whole of the Earth surface.
