Course Description

This course includes prediction using machine learning; choice of features, including for text, images, time series; model selection (e.g. linear, kernel, neural net); learning as empirical risk minimization; common machine learning techniques (linear regression, logistic regression, SVMs, kernel trick, neural nets, convolutional neural nets, kNN, k-Means); evaluating machine learning methods (cross-validation, bootstrapping, ROC, use of a baseline); and practical experience of applying machine learning methods to real data.
