UCEAP Semester Units

3.30

Course Description

This course is for engineering students intending to focus in the area of environmental engineering. The course lays a foundation for more intensive courses in later stages by introducing concepts about, among other things, environmental ethics, engineering calculations, and the fundamental biological, chemical, and physical processes used in environmental engineering. Applications of these concepts to developing engineering solutions for several contemporary environmental problems are also examined.

Language(s) of Instruction
