Course Description

This course is an introduction to the field of health economics, a rapidly growing field of applied economics. Economic concepts such as scarcity, incentives, marginal analysis, profit maximization, and cost-minimization will be used throughout this course. Students will analyze this important sector using economic analysis methods.

Topics include the production of health capital; demand-and-supply analysis of health and medical care; the production of health; asymmetric information in insurance markets; the role of government in the provision of health care; economics of mental health and happiness; and health policy debates in developing countries.
