3.30

### **Course Description**

The course focuses on the natural world and our relationship with it. It offers an in-depth exploration of topics in environmental geography, focusing on the biological, chemical, and physical processes that sustain life on Earth, human impacts on these processes, and strategies for mitigating environmental damage. Students engage with concepts of sustainability, conservation, and environmental policy. Topics include biodiversity loss, water, air and soil pollution, climate change, land modifications, environmental technologies, environmental policies and management decisions. By fostering critical thinking and problem-solving skills, the course prepares students to contribute positively to environmental conservation, policy development, and sustainable management practices in various sectors.
