Course Description

This course cultivates a deep understanding of data augmentation techniques and robust machine learning principles and the ability to apply them to real-world problems.

Students will implement various data augmentation techniques using programming languages and machine learning libraries and develop problem-solving skills to diagnose and address the performance degradation caused by noisy labels and imbalanced data. Additionally, students will master the use of cross-validation and performance metrics to effectively evaluate models, and learn methods to interpret and explain model predictions, ensuring the development of transparent and trustworthy machine learning applications. The course also emphasizes the ethical aspects of data augmentation and robust machine learning, fostering the ability to implement ethical practices that ensure responsible use of technology. Students will nurture a research-oriented mindset and enhance their collaboration skills through team projects and group discussions, promoting the exchange of ideas.
