COURSE DETAIL

TIME-SERIES ANALYSIS
Country Hong Kong
Host Institution University of Hong Kong
Program(s) University of Hong Kong
UCEAP Course Level Upper Division
UCEAP Subject Area(s) Statistics
UCEAP Course Number 120
UCEAP Course Suffix
UCEAP Official Title TIME-SERIES ANALYSIS
UCEAP Transcript Title TIME SERIES ANALYS
UCEAP Quarter Units 5.00
UCEAP Semester Units 3.30

Course Description

A time series consists of a set of observations on a random variable taken over time. Time series arise naturally in climatology, economics, environment studies, finance and many other disciplines. The observations in a time series are usually correlated; the course establishes a framework to discuss this. This course distinguishes different type of time series, investigates various representations for the processes and studies the relative merits of different forecasting procedures. Students will analyze real time-series data on the computer. Topics: Stationary and the autocorrelation functions; linear stationary models; linear non-stationary models; model identification; estimation and diagnostic checking; seasonal models and forecasting methods for time series.

Language(s) of Instruction
English

Host Institution Course Number
STAT4601

Host Institution Course Title
