2.00

## Course Description

The course covers the basic relationship and mechanism of action of climate change and energy consumption, and introduces the basic theory of climate and environment sustainable development. The course contains three sections: climate change and energy consumption, low carbon and environmental sustainability, low carbon and environmental protection practices and actions. Each section contains a number of interconnected parts, the integrated contracture exists among three sections as well. The course provides understating of the characteristics and laws related to climate change and energy consumption under the low carbon and environmental protection policies, technology and management.
