4.00

Course Description

Through the teaching of this course, students are introduced to the basic ideas and methods of object-oriented programming. Through learning and combining computer practice, students can understand the general methods of computer problem solving, master interface production, program writing and debugging, and enable students to have the ability to write simple application programs. This will lay a solid foundation for further self-study of other programming languages and improve programming skills in the future, while also improving students' logical thinking ability and meticulous thinking ability.

The basic contents include: VB development environment and basic programming steps, basic controls and language basics, basic control structures, arrays, procedures, commonly used controls, menus, multiple forms and files, etc.

Language(s) of Instruction
