Course Description

This course covers the fundamental concepts of how computers perform at machine and assembly language level. It looks at the design of an instruction set architecture and figures out what makes a Reduced Instruction Set Computer (RISC) differ from a Complex Instruction Set Computer (CISC). The course discusses basic design principles by understanding the components in a computer and the performance of a computer system.

This course provides the required background for students who are interested in designing computer systems, doing serious development of operating system kernels and device drivers, and making better applications of computer systems.

Course prerequisites: A background in Digital Logic, C Language and Assembly Language is required.

Language(s) of Instruction

English
