5.00

**UCEAP Semester Units**

3.30

## Course Description

This course assists in the understanding of the history of climate change on the Earth and the factors that cause it. The course covers the causes of climate change and the history of climate change on Earth, and the contribution of historical climatology to this understanding. Students outline the key causes of climate change and their interrelatedness, discuss the history of climate change on Earth, both natural and anthropogenic, and use the principles of historical climatology to investigate past climate change.
