8.00

UCEAP Semester Units

5.30

Course Description

This course examines how ecosystems function and how they provide services for humans: information which is essential for ecologists, conservationists, and land managers. The course considers examples of natural systems being altered by man to demonstrate how ecosystems function and the consequences of anthropogenic change. Disturbance and regulation in ecosystems, atmospheric, and hydrological regulation (including the greenhouse effect and acidification), soil ecology, conservation and management of natural resources, agricultural and grazed ecosystems (including GMOs), urban ecosystems, and aspects of sustainable development are also discussed.

Language(s) of Instruction

English
