Course Description

Sustainable development and the Sustainable Development Goals (SDGs) are broad, context dependent, and interdisciplinary. This is at the heart of this course. Through short, pre-recorded lecturers from experts in different disciplines, to critical discussions of the Universities' own policies, this course breaks down this complex area into core principles, academic skills, and authentic case studies. The SDGs guide activity around the world, and this too is at the center of this course - critically exploring these goals from different epistemic, political, and cultural perspectives and giving students room to bring their experiences to debates and discussions.
