CLIMATE, ENVIRONMENT AND NATURE: BASIC ANTHROPOLOGICAL CONCEPTS

**UCEAP Transcript Title**
CLIMATE/ENVR&NATURE

**UCEAP Quarter Units**
6.00

**UCEAP Semester Units**
4.00

**Course Description**

This course is an introduction to how anthropological analysis can contribute to an understanding of climate change, environmental justice, and human perceptions of nature. Although anthropology primarily focuses on social relations, environmental anthropology has historically been preoccupied with the interaction between natural and social processes. Through a mix of theory and ethnographic examples from around the globe, the course introduces newer perspectives on climate change and nature and cosmology, environmental justice, multispecies relations, care, conflict, and climate activism. The course includes a one-day collective fieldwork near Copenhagen and presentation of findings, collective reading and presentations of the work of a key author, and joint of essay writing based on fieldwork and theory.

**Language(s) of Instruction**
English
