Upper Division

UCEAP Subject Area(s)
Biochemistry

UCEAP Course Number
103

UCEAP Course Suffix
S

UCEAP Official Title
ECOLOGY AND CONSERVATION: CURRENT TOPICS

UCEAP Transcript Title
ECOLGY & CONSERVATN

UCEAP Quarter Units
6.00

UCEAP Semester Units

4.00

Course Description

This summer course covers current topics in ecology and conservation. In addition to lectures and workshops, there is an emphasis on learning through field classes, some of which will take place in the South Downs National Park adjacent to the University of Sussex campus. Have the opportunity for experiential learning on ecology and conservation, presented by practicing scientists using their own research projects as examples. Participants learn survey and identification skills through field trips and develop an understanding of conservation/applied ecology in relation to real world problems in such diverse areas as coastal conservation, rewilding and/or biodiversity monitoring in arthropods and vertebrates. This module assumes a basic level of biological/ecological knowledge, such as that provided by a Biology A-Level or first-year undergraduate instruction.

Language(s) of Instruction
English
