**UCEAP Semester Units**

5.30

## Course Description

This course considers the ways that science and technology shape the relationship between humans and the environment. Students examine a number of topical historical and contemporary cases and in the process reflect on the role played by science and technology in how societies understand nature and environment. Themes to be dealt with include science and cultural uses of natural resources; sociology of climate science; science, technology, and international development; science and public understandings of environmental debates; science, knowledge, and power; and environmentalism. Students approach these themes by studying various environmental topics, often reflecting current events.
