UCEAP Transcript Title FIXED INCOME SECURT
UCEAP Quarter Units 4.50
UCEAP Semester Units 3.00

Course Description

This course is designed for students pursuing careers in fixed-income securities trading and modeling, as well as those interested in academic or regulatory research in fixed-income markets and credit risk management. It provides a comprehensive overview of China’s fixed-income markets and policy interest rate system. Students will learn key modeling techniques to price and analyze various fixed-income instruments, including default-free bonds, corporate bonds, and interest-rate derivatives. While the topics are inherently quantitative, the course emphasizes practical applications over purely technical aspects. The goal is to equip students with fundamental knowledge, trading strategies, and hands-on programming skills.
