## Course Description

This course offers an introduction to the field of psychology including concepts of human behavior as well as scientific research methods. It explores basic psychological processes including: attention, perception, motivation, emotion, negative and positive emotions, learning, memory, consciousness and its alterations, personality, etc. Additionally, this course discusses how scientific knowledge about human behavior and basic processes is applied to various specific fields of intervention in criminology: the study of lying, deception and simulation, ways to improve the memory of witnesses and victims, or the effect of traumatic events on the victims.
